

CLAIMS:

1. A curable fluoropolyether base rubber composition comprising

(A) 100 parts by weight of a linear fluoropolyether compound containing at least two alkenyl groups in a molecule and having a perfluoroalkyl ether structure in its backbone,

(B) 10 to 40 parts by weight of a silica filler having a specific surface area of at least 100 m<sup>2</sup>/g and a vinyl content of  $1 \times 10^{-3}$  to  $2 \times 10^{-2}$  mol/100 g, which has been surface hydrophobized,

(C) an effective amount to cure component (A) of an organosilicon compound having at least two hydrogen atoms each bound to a silicon atom in a molecule, and

(D) a catalytic amount of a hydrosilylation catalyst.

2. The composition of claim 1 wherein the linear fluoropolyether compound (A) is of the following general formula (1):

wherein X is independently -CH<sub>2</sub>-, -CH<sub>2</sub>O- or -Y-NR-CO- wherein Y is -CH<sub>2</sub>- or a group of the following structural formula:

and R is hydrogen, methyl, phenyl or allyl,

letter p is independently equal to 0 or 1, L is an integer of 2 to 6, and m and n each are an integer of 0 to 200.
